COMM ONE[®] ELECTRONIC DIRECTORY

Comm One Electronic Directory is a software tool that tracks Directory Information for all employees of your company. Information can be imported from Comm One Call Accounting Pro, or from Comm One Cable Management Pro. The system is an easy-to-use tool for looking up employees.

DEFAULT DIRECTORY FIELDS

You can customize Comm One Electronic Directory fields as needed, but the default fields used in the system include:

Full Name	First Name
Department Code	Department Name
Telephone Extension	Fax Number
Pager Number	Cell Number
Building / Room	Mailstop
Type	Secretary (Encrypted)
Home Number (Encrypted)	Employee Number (Encrypted)
Social Security Number (Encrypted)	Other (Encrypted)

DIRECTORY SEARCH FEATURES

The directory can be searched by any of the above fields to find the entry that you are looking for. The system is indexed on all fields so the searches are instant. If you record is found, you are taken to the closest entry to the one you searched for.

USER-DEFINED DIRECTORY FIELDS

All of the directory fields are User-Definable so you can change them as necessary to match your requirements.

ENCRYPTED FIELDS WITH SECURITY LEVELS

A number of the directory fields are encrypted so that you can use them to track sensitive information that you do not want everyone to have access to. These fields are encrypted in the database with an algorithm so that you cannot understand them if you look at the raw data. With the correct password, these fields are unencrypted so that you can view and edit them.

COMPANY WIDE NETWORK DIRECTORY

The electronic directory is multi-user so that you can implement it company wide if you wish. This will make all of the information contained in the directory available to specified employees. The system also works well for Telephone Operators who look up information on a call by call basis.
